

ClearOutTM 41 PLUS

Broad Spectrum Herbicide

*Introducing ClearOutTM.
The farmer's glyphosate.*

41% glyphosate
and fully loaded 15% surfactant
for 100% performance.

The direct replacement for RoundUp.[®] At a lower cost.

If you use Roundup,[®] it's no secret that you're paying a premium for glyphosate herbicide. Until now you've had little choice but to continue paying those premium prices. But no more. Now you can reap substantial savings and boost your bottom line by making the move to ClearOutTM 41 Plus herbicide. It's 41% glyphosate, fully loaded with 15% surfactant, and a direct replacement for Roundup Ultra[®]—at a significantly lower cost.

ClearOutTM is the post-patent glyphosate herbicide that is totally independent of Monsanto. Most other glyphosate herbicides are produced by Monsanto and licensed to affiliated companies. Thanks to ClearOut, American farmers can now benefit from true glyphosate competition.

ClearOut 41 Plus is the professional herbicide for agricultural weed control. Its broad complete label enables use over the top of Roundup Ready crops. Thousands of farmers have already made the switch to ClearOut herbicide, and they've enjoyed substantial savings while experiencing excellent results.

Key product benefits .

- The farmer's direct replacement for Roundup Ultra.[®]
- Provides significant cost-savings over Roundup Ultra.
- Fully loaded surfactant for 100% performance without extra cost.
- Broad complete label enables use on Roundup Ready[®] crops.
- Kills the root.
- Rapidly rainfast.
- Environmentally friendly.
- Typical use is one quart per acre
- Available in 1, 2.5, 30, 275 and 4,500 gallon sizes.

Glyphosate

"I used to use Roundup. I've switched to ClearOut™ and now I'm happy with my glyphosate costs."

How ClearOut works.

ClearOut 41 Plus is a broad spectrum postemergence herbicide. When you apply ClearOut, its fully loaded surfactant formulation achieves rapid penetration into the leaf and is soon rainfast. The herbicide quickly translocates throughout the entire weed and *kills the root*.

Glyphosate prevents the plant from producing an essential amino acid necessary for synthesis of protein. Plant metabolism fails and stifles the life of the weed. The potent effects of ClearOut herbicide may take one to four days to impact annual weeds, and up to a week or longer to impact perennial weeds. Typically a weed will wilt, yellow, turn brown, and then completely deteriorate right down to the root.

Environmental benefits.

ClearOut glyphosate herbicide is facilitating the growth of conservation agriculture. It allows the improved soil management practices of no tillage or reduced tillage to lessen soil erosion and degradation.

ClearOut herbicide binds to soil particles and won't move through the soil to untreated plants. Any ClearOut not absorbed by weeds biodegrades over time into natural materials like carbon dioxide.

Your choice is clear.

Make the move to ClearOut™ 41 Plus and free yourself from Roundup's premium prices and Monsanto's control of the glyphosate supply. ClearOut herbicide helps farmers throughout the United States improve their bottom line. Call your dealer today. And experience a clear, positive difference in price-performance for weed control.
