# Press Release

## **BIOPHOS<sup>®</sup> PRO Systemic Fungicide Now Available Exclusively from Agrisel USA, Inc.**

**Atlanta, Ga., February 2005:** Agrisel USA, Inc., a leading provider of fungicides, herbicides and insecticides, has been granted an EPA-approved label for **BIOPHOS<sup>®</sup> PRO**, a powerful, economical and environmentally friendly fungicide labeled for use in the turf, woody ornamentals, lawns and nonbearing fruit and nut tree crops. BIOPHOS<sup>®</sup> PRO will now be marketed exclusively through Agrisel USA, Inc., throughout North America, Mexico and the Caribbean.

Agrisel's BIOPHOS PRO is an effective, eco-friendly fungicide that helps the plant activate its natural defense mechanisms to resist the onset of disease. If disease is already present, BIOPHOS PRO helps eliminate the disease while protecting new growth against downy mildews, powdery mildews, rusts, root rot and leaf spots. Beyond its effective fungal control, BIOPHOS PRO is a source of nutrients and delivers potassium and phosphorus – two essential sources of nutrients. An EPA-registered biorational fungicide, BIOPHOS PRO has a minimal effect on the environment and is of low risk to users and nontarget organisms. Apply BIOPHOS PRO as a foliar spray or drench on a two- to four-week schedule when disease threatens plant health or when disease has already established.

"Results to date with this EPA-approved formulation have been excellent against a wide variety of turf, nursery, ornamental and greenhouse fungal diseases," notes Art Assad, President of Agrisel USA, Inc. "This gives our customers a new, EPA-approved option for control of fungi in their operations."

BIOPHOS<sup>®</sup> PRO is registered for use in most states. For a free brochure containing more information and pricing regarding BIOPHOS<sup>®</sup> PRO, call Agrisel today at 1-877-AGRISEL or visit [www.agrisel.com](http://www.agrisel.com).
