Press Release

CHLOROSEL[®] PRO 720 Flowable Fungicide Now Available Exclusively from Agrisel USA, Inc.

Atlanta, Ga., February 2005: Agrisel USA, Inc. announced today the availability of new **CHLOROSEL[®] PRO 720** flowable fungicide. This proven, highly effective formulation contains more active chlorothalonil per liter (720 grams/liter), while more economically priced than competitive, less-active fungicide formulations.

“What makes CHLOROSEL PRO 720 so effective as a contact flowable fungicide is its superior formulation and surfactants that allow the active chlorothalonil to hold up to excessive rain and moisture,” says Art Assad, President, Agrisel USA. “The longer the active fungicide is in contact with the leaf, the more protection and longer-lasting control the product will provide.”

Approved for uses on all turf and ornamental grasses, CHLOROSEL PRO 720 has consistently been one of the industry’s best performers by preventing common fungus problems on turf. CHLOROSEL PRO 720 fungicide rapidly sticks to the plant surface and works on contact to control or suppress such problems in turfgrass as Dollar Spot, Brown Patch, Rusts, Powdery Mildew, Anthracnose, Fusarium Blight, Summer Patch, Gray and Pink Snow Mold, Fusarium Patch and Southern Blight.

CHLOROSEL PRO 720 flowable fungicide is also cleared for use in forestry, rangeland and right-of-way uses, as well as fungal diseases in nurseries, seed orchards, Christmas tree plantations and greenhouses.

CHLOROSEL PRO 720 is a contact fungicide which acts to prevent fungal diseases in plants. It acts on the enzyme systems in fungi, and persists on the surface of plant foliage. The timing of application depends on the fungus to be controlled, and the growth stage of the plants to be protected.

“Results to date with this EPA-approved formulation have been excellent against a wide variety of turf, nursery, ornamental and greenhouse fungal diseases,” Assad notes. “This gives our customers a new, EPA-approved option for control of fungi in their operations.”

CHLOROSEL[®] PRO 720 flowable fungicide is registered for use in most states. For additional information or pricing on this new flowable fungicide, call Agrisel USA, Inc. today at 1-877-AGRISEL or visit www.agrisel.com.
